SUMMARY

Second-year Computer Science student with hands-on experience in web development, machine learning, natural language processing (NLP), generative AI, and robotic process automation (RPA) using UiPath. Passionate about developing innovative solutions, leveraging data-driven insights, and continuously expanding technical and problem-solving expertise.

EDUCATION

Rajalakshmi Engineering College BE | Computer Science and Engineering Sep 2024- May 2028
CGPA: 8.61
New Prince Matriculation Higher Secondary School
HSC | 94% June 2021-May 2024
SSLC | 97%

PROJECTS

- Elevate – Job Recruitment & Job Search Portal** - https://github.com/Shivani-R-J/Elevate-Job_Portal
- Technologies:** HTML, CSS, JavaScript, MySQL, Java Servlets, JSP, JDBC
 - Built a full-stack job recruitment platform where candidates can apply for jobs and track application status, while recruiters can post jobs and shortlist or reject candidates. Implemented role-based access, secure authentication, and real-time application status updates.
- PDF-Based Document Summarization System** - <https://github.com/Shivani-R-J/PDF-Based-Document-Summarization-System>
- Technologies:** Python, Streamlit, NLP, Hugging Face Transformers (BART), LangChain, FAISS
 - Developed a document QA and summarization tool where users upload PDFs and receive concise summaries or query-specific answers. Used vector embeddings (FAISS) for semantic search and chunked retrieval for scalable processing of long documents.
- Text-to-Image Art Generator** - <https://github.com/Shivani-R-J/Text-to-Image-Generator>
- Technologies:** Python, Streamlit, Stable Diffusion, Hugging Face Diffusers, PyTorch
 - Built a prompt-to-image web app using Stable Diffusion with GPU-optimized model loading for fast inference. Designed an intuitive Streamlit UI allowing users to adjust parameters and download generated artwork.
- Player Performance Clustering & Analysis**
- Technologies:** Python, Pandas, Scikit-learn, PCA, K-Means, Hierarchical Clustering, Matplotlib
 - Clustered football players by performance metrics using K-Means and hierarchical methods with PCA dimensionality reduction. Achieved a Silhouette Score of 0.888, indicating strong cluster separation for reliable player profiling.

SKILLS

Languages	Web Development	AI/ML		Tools & Platforms
- Python - Java - SQL	- HTML - CSS - JavaScript - JSP - Servlets	- Scikit-learn - Hugging Face - LangChain - FAISS	- PyTorch - RAG - NLP - Stable Diffusion	- Git & GitHub - Microsoft Azure - UiPath - MySQL - Canva

PROFESSIONAL EXPERIENCE

Graphic Design Intern — Inamigos Foundation

Designed 15+ posters and promotional assets using Canva and Adobe tools, adhering to brand guidelines. Created content for social media campaigns targeting student and youth audiences, increasing post engagement through visually consistent design.

Board Event Team Member — IEEE Computer Society, REC

Co-organized and executed 5+ technical events including workshops and competitions for 100+ student attendees. Managed event promotion, scheduling coordination, and on-ground logistics.

ACCOMPLISHMENTS

WIE Hacks Hackathon: Secured 1st Place by developing LURNIQ, a VARK-based personalized learning platform that delivers adaptive learning experiences through AI-generated content and learning-style-based recommendations.

Case Study Competition : Secured first place in "Crack the Case" a case study competition conducted at college by presenting innovative problem analysis, structured solutions, and effective teamwork

Hackerz – National Level Technical Symposium : Achieved Runner-Up position by collaboratively brainstorming, designing a solution, and pitching it within a 30-minute problem-solving challenge.
